

Press Brief

E-Mobility Europe is a trade association that vouches for the transition to electric mobility across Europe. It brings together over 80 members including electric vehicles (EV) associations, vehicle manufacturers, fleet owners and technology to advocate for a successful transition that benefits both people and industries.

Our views can be encapsulated in 4 points:

1

The Importance of Tailpipe Emissions accounting

It ensures clarity, global comparability and recognises EVs as ZEVs – in turn it promotes a culture of electrification that ensure a proper transition

2

Focus on Electric Vehicles

Transitional technologies will dilute demand for electric vehicles and limit the boost for their demand. Both the climate, and Europe can not afford it to reach the 2035 targets !

3

Corporate vehicles

Expanding the coverage of corporate fleets is a strategic priority, as it drives significant and predictable demand for electric vehicles, accelerating the transition to sustainable mobility.

4

Ambitious targets for Europe's future

Setting ambitious CO₂ reduction target by 2035 is crucial to accelerate electric vehicle investment and prevent the worst impacts of the climate crisis.

Together, we can drive change for Europe's future !
